HOW FAR TO YOUR STOVE? Seven Miles carrying a hot iron

It is a conservative estimate that, in ironing the weekly wash for an average family, a woman sadks seven miles a year between ironing board and stove. This distance, of course, may be less or greater for you depending upon the distance between the two in your kitchen.

The G-E Electric Flatiron will save all this waste effort. It furnishes its own heat and stays hot until the forming is finished. You don't have to leave the ironing board and you can work wherever there is an electrical connection.

How much would a G-E iron save for YOU?
